

# Deeper Understanding (Cycles 8-10) Review

Name: Anne Sirs

Try as many as you like. For a full DU: Two fully correct or fixable

Match the Position Graphs to one of the Velocity Graphs

Track the FRONT of the person's foot. Fill in the rest of the motion

$t=0s$

$t=3s$

Their acceleration is 3 m/s/s.

| t (s) | x (m) |   | v (m/s) |
|-------|-------|---|---------|
| 0     | -3    |   |         |
| 1     | -2    | ← | 1       |
| 2     | 2     | ← | 4       |
| 3     | 9     | ← | 7       |

Alice's Car

Starting speed =  $0 \text{ m/s}$   
Acceleration =  $2 \text{ m/s/s}$   
Top speed =  $16 \text{ m/s}$

Bob's Car

Starting speed =  $3 \text{ m/s}$   
Acceleration =  $1 \text{ m/s/s}$   
Top speed =  $9 \text{ m/s}$

Part 1:

Alice:

$v_i = 0 \text{ m/s}$   
 $v_f = 16 \text{ m/s}$   
 $a = 2 \text{ m/s/s}$   
 $t = ?$

$$v_f = v_i + at$$

$$\begin{array}{ccc} \downarrow & \downarrow & \downarrow \\ 16 & = & 0 + (2)t \end{array}$$

$$t = 8 \text{ seconds}$$

Bob:

$v_i = 3 \text{ m/s}$   
 $v_f = 9 \text{ m/s}$   
 $a = 1 \text{ m/s/s}$   
 $t = ?$

$$v_f = v_i + at$$

$$\begin{array}{ccc} \downarrow & \downarrow & \downarrow \\ 9 & = & 3 + (1)t \end{array}$$

$$t = 6 \text{ seconds}$$

Part 2:

When Alice's car reaches top speed, it takes 8 seconds.

Bob's first 6 seconds:

$$V_i = 3 \text{ m/s}$$

$$V_f = 9 \text{ m/s}$$

$$a = 1 \text{ m/s/s}$$

$$d = ?$$

$$V_f^2 = V_i^2 + 2ad$$

$$\begin{array}{ccccccc} \downarrow & & \downarrow & & \downarrow & & \\ 9^2 & = & 3^2 & + & 2(1)d & \Rightarrow & 81 = 9 + 2d \quad d = \underline{\underline{36 \text{ m}}} \end{array}$$

Then, the other 2 seconds

$$V_i = 9 \text{ m/s}$$

$$a = 0 \text{ m/s/s}$$

$$t = 2 \text{ seconds}$$

$$d = ?$$

$$d = V_i t + \frac{1}{2} a t^2$$

$$\begin{array}{ccccccc} \downarrow & \downarrow & \downarrow & & \downarrow & & \\ d = & (9)(2) & + & \frac{1}{2}(0)(2^2) & & & \end{array}$$

$$d = \underline{\underline{18 \text{ m}}}$$

$$36 \text{ m} + 18 \text{ m} =$$

$$\boxed{54 \text{ meters}}$$

### Part 3:

After 8 seconds Bob's car travels 54 meters

Alice's car:

$$v_i = 0 \text{ m/s}$$

$$v_f = 16 \text{ m/s}$$

$$a = 2 \text{ m/s}^2$$

$$d = ?$$

$$v_f^2 = v_i^2 + 2ad$$

↓

$$256 = 0 + 2(2)d$$

$$256 = 4d$$

$$d = 64 \text{ m}$$

So... it's less than 8 seconds!

After 6 seconds, Bob's car traveled 36 meters.

Alice's car

$$v_i = 0 \text{ m/s}$$

$$a = 2 \text{ m/s}^2$$

$$t = 6 \text{ s}$$

$$d = ?$$

$$d = v_i t + \frac{1}{2} a t^2$$

↓ ↓

$$d = 0 + \frac{1}{2}(2)(6^2)$$

$$d = 36 \text{ meters}$$

After 6 seconds Alice's car  
Passed Bob's!!

### Part 4:

Alice's car passes Bob's car in 6 seconds

$$V_i = 0 \text{ m/s}$$

$$a = 2 \text{ m/s/s}$$

$$t = 6 \text{ seconds}$$

$$V_f = ?$$

$$V_f = V_i + at$$

$$\begin{array}{cccc} \downarrow & \downarrow & \downarrow & \downarrow \\ V_f = 0 + (2)(6) \end{array}$$

$$V_f = 12 \text{ m/s}$$

Alice's car is moving at 12 m/s when it passes Bob's!
